

FIBREMI^X™

DESCRIPTION

FibreMiX is manufactured from single species clean white fibre and does not contain any recycled or previously used or blended fibre. Due to its highly compressible nature, a tote of FibreMiX contains 4 times as much product, surface area and absorbency as conventional wood shavings. Both the production and its production process are subject to SageLink's high levels of product specification and quality control. Ideal for areas where bulk product is unavailable or prohibitively expensive, where protection of the product is required and for smaller volume applications.

PACKAGING

FibreMiX is compressed into weather-proof totes (approximately 4'x4'x4'). The totes offer protection to maintain quality and offer significant cost savings when mixing in wet, muddy or snowy conditions.

TRANSPORTATION & STORAGE

There are substantial transportation cost savings to be realized when transporting a compacted product. Totes offer convenient transportation and handling options. FibreMiX is the ideal product for customers needing to get maximum value for their purchasing, transporting and storing dollar.

PRODUCT TECHNICAL INFORMATION

Fibre Source	Clean white wood fibre
Product Process	Kiln dried and screened
Moisture Content	< 4% by weight
Particle Size	<5 mm (1/4 inch)
